This Conference Proceeding is brought to you for free and open access by the Faculty and Staff Research at SOAR @ USA. It has been accepted for inclusion in Occupational Therapy Collection by an authorized administrator of SOAR @ USA. For more information, please contact soar@usa.edu, erobinson@usa.edu.
Exploring the Benefits of Cross-Cultural Collaborative Learning Projects: A Pilot Study.

KAYLA COLLINS, MOT, EdD, OT/L; PAVLINA PSYCHOULI, MSC, PhD, OTR; MARY ZADNIK ScD, MED, OTR/L
Overview

- How the project began
- Why the collaboration was created
- Leveraging resources
- Creating, funding, and running the project
- Preliminary outcomes
Background: How the project began

- Understanding the impact of digital teaching and learning
- Expanding our reach as campus communities
- Identifying gaps in student exposure and experience with cultural diversity
Purpose: why this project was created

- The intent of this project was to expose students to other cultures
- To broaden students' understanding of the impact of illness, social issues, and economy on the health of our local and global communities
- To provide students with an opportunity to learn about the role of occupational therapy in other parts of the world: educational preparedness, job roles, barriers and supports
Leveraging Resources

- Who we are:
  - University of St. Augustine for Health Sciences
  - European University of Cyprus

- Global Network of Education
  - A network of educational communities under one company

- Partnering and Making connections: Networking
Creating the project

- Where did we start?
  - Planning & Logistics

- What considerations did we make?
  - Student engagement & Impact
  - Language and time zone barriers

- How did we move forward?
  - Small pre-pilot to test connections, communication, and compatibility
  - Identifying technology to enhance communication and connectivity
  - Creating a pilot project, IRB, grant funding
The Pilot:

- Students were invited to meet each other via Facebook and asked to post a comment and introduce themselves.
- The Cultural Awareness Scale for Occupational Therapy students was used to establish a baseline of awareness (pre-post).
- Students were placed into groups of 5-7 and dates and times were established for discussion.
  - Used zoom and interpreter services.
- After the final discussion group met, the students on each campus were brought together to debrief the experience.
What did this look like for the students?
Facilitating Discussion

- Agenda for each session included the following
  - Introductions
  - Identification of the discussion topic with a brief summary of the perspective of each culture related to the topic (sessions were recorded)
  - Discussion facilitator asked each group to consider each of the following questions:
    - Describe how your culture views the vulnerable population you were assigned.
    - What barriers and supports exist for this population for general participation in everyday tasks?
    - Are there stigmas associated with the population? How might we help overcome these?
    - What is the role of OT in working with the population?
    - How might we best prepare you all as future practitioners when considering the needs of this population?
  - Open discussion for interaction and summary
Preliminary Outcomes

- Currently evaluating the surveys
- Student qualitative response: Enhancing and evolving perspectives
  - Relating
  - Understanding
  - Expanding
- We want more time to chat!
Future Plans

- Continue to run the project with enhanced communication and more free form discussion
- Find ways to continue the communication and collaboration among students
- Expand the project: evaluate the potential to include other universities and student groups
- Focus on continuing to align the project with the mission and vision of both Universities as well as a focus on the mission, vision, and focus of WFOT
