

Qualitative Evaluation of Occupational Therapy Assessments in Treating Veterans with PTSD Who are Transitioning into Civilian Life

Natalia Marquez-Sterling, OTDS; Pamela A. Kasyan-Howe, OTD, OTR/L; Kristen J. Domville, OTD, OTR/L; Lisa J. Schubert, OTD, OTR/L

BACKGROUND

Posttraumatic stress disorder (PTSD) is known to affect the well-being of veterans and is exacerbated by the transition stressors of becoming a civilian once more (Mobbs et al., 2018). The clinical skills of OTs are uniquely suited to promote independence for veterans with PTSD who are transitioning into civilian life (Kinney et al., 2020)

PROBLEM

Occupational therapists lack consistent assessment tools to use when treating veterans with PTSD who are transitioning into civilian life (Kerr et al., 2020)

PURPOSE

Explore OTs' perception of occupation-based assessments resulting in increased understanding of standardized strategies to evaluate and treat traumatized veterans transitioning into civilian life.

Research Questions:

R1: What are the strengths of an OT based assessment toolkit for veterans with PTSD transitioning into civilian life?

R2: What are the limitations of an OT based assessment toolkit for veterans with PTSD transitioning into civilian life?

R3: How do OTs view their role in treating veterans with PTSD transitioning into civilian life?

METHODS

Design: Qualitative Research Study

Recruitment: Snowball sampling method utilizing email, social media, and CommunOT

Participants: Licensed OT's who work with veterans with PTSD within the U.S.

Data Collection: Virtual Interview via Zoom

Six participants participated in virtual consent, introduction to the toolkit, and a semi structured interview.

Data Analysis: Thematic Analysis

The interviews were audio recorded utilizing Zoom software. The audio was transcribed utilizing transcription software.

Following transcription, the data was analyzed, organized, and coded into themes to answer the research questions.

Assessment Tools:

1. The Canadian Occupational Performance Measure
2. The Role Checklist
3. The Occupational Questionnaire
4. the Modified Interest checklist
5. The Self-efficacy Scale
6. The Short PTSD Rating Interview

Theoretical Framework: MOHO

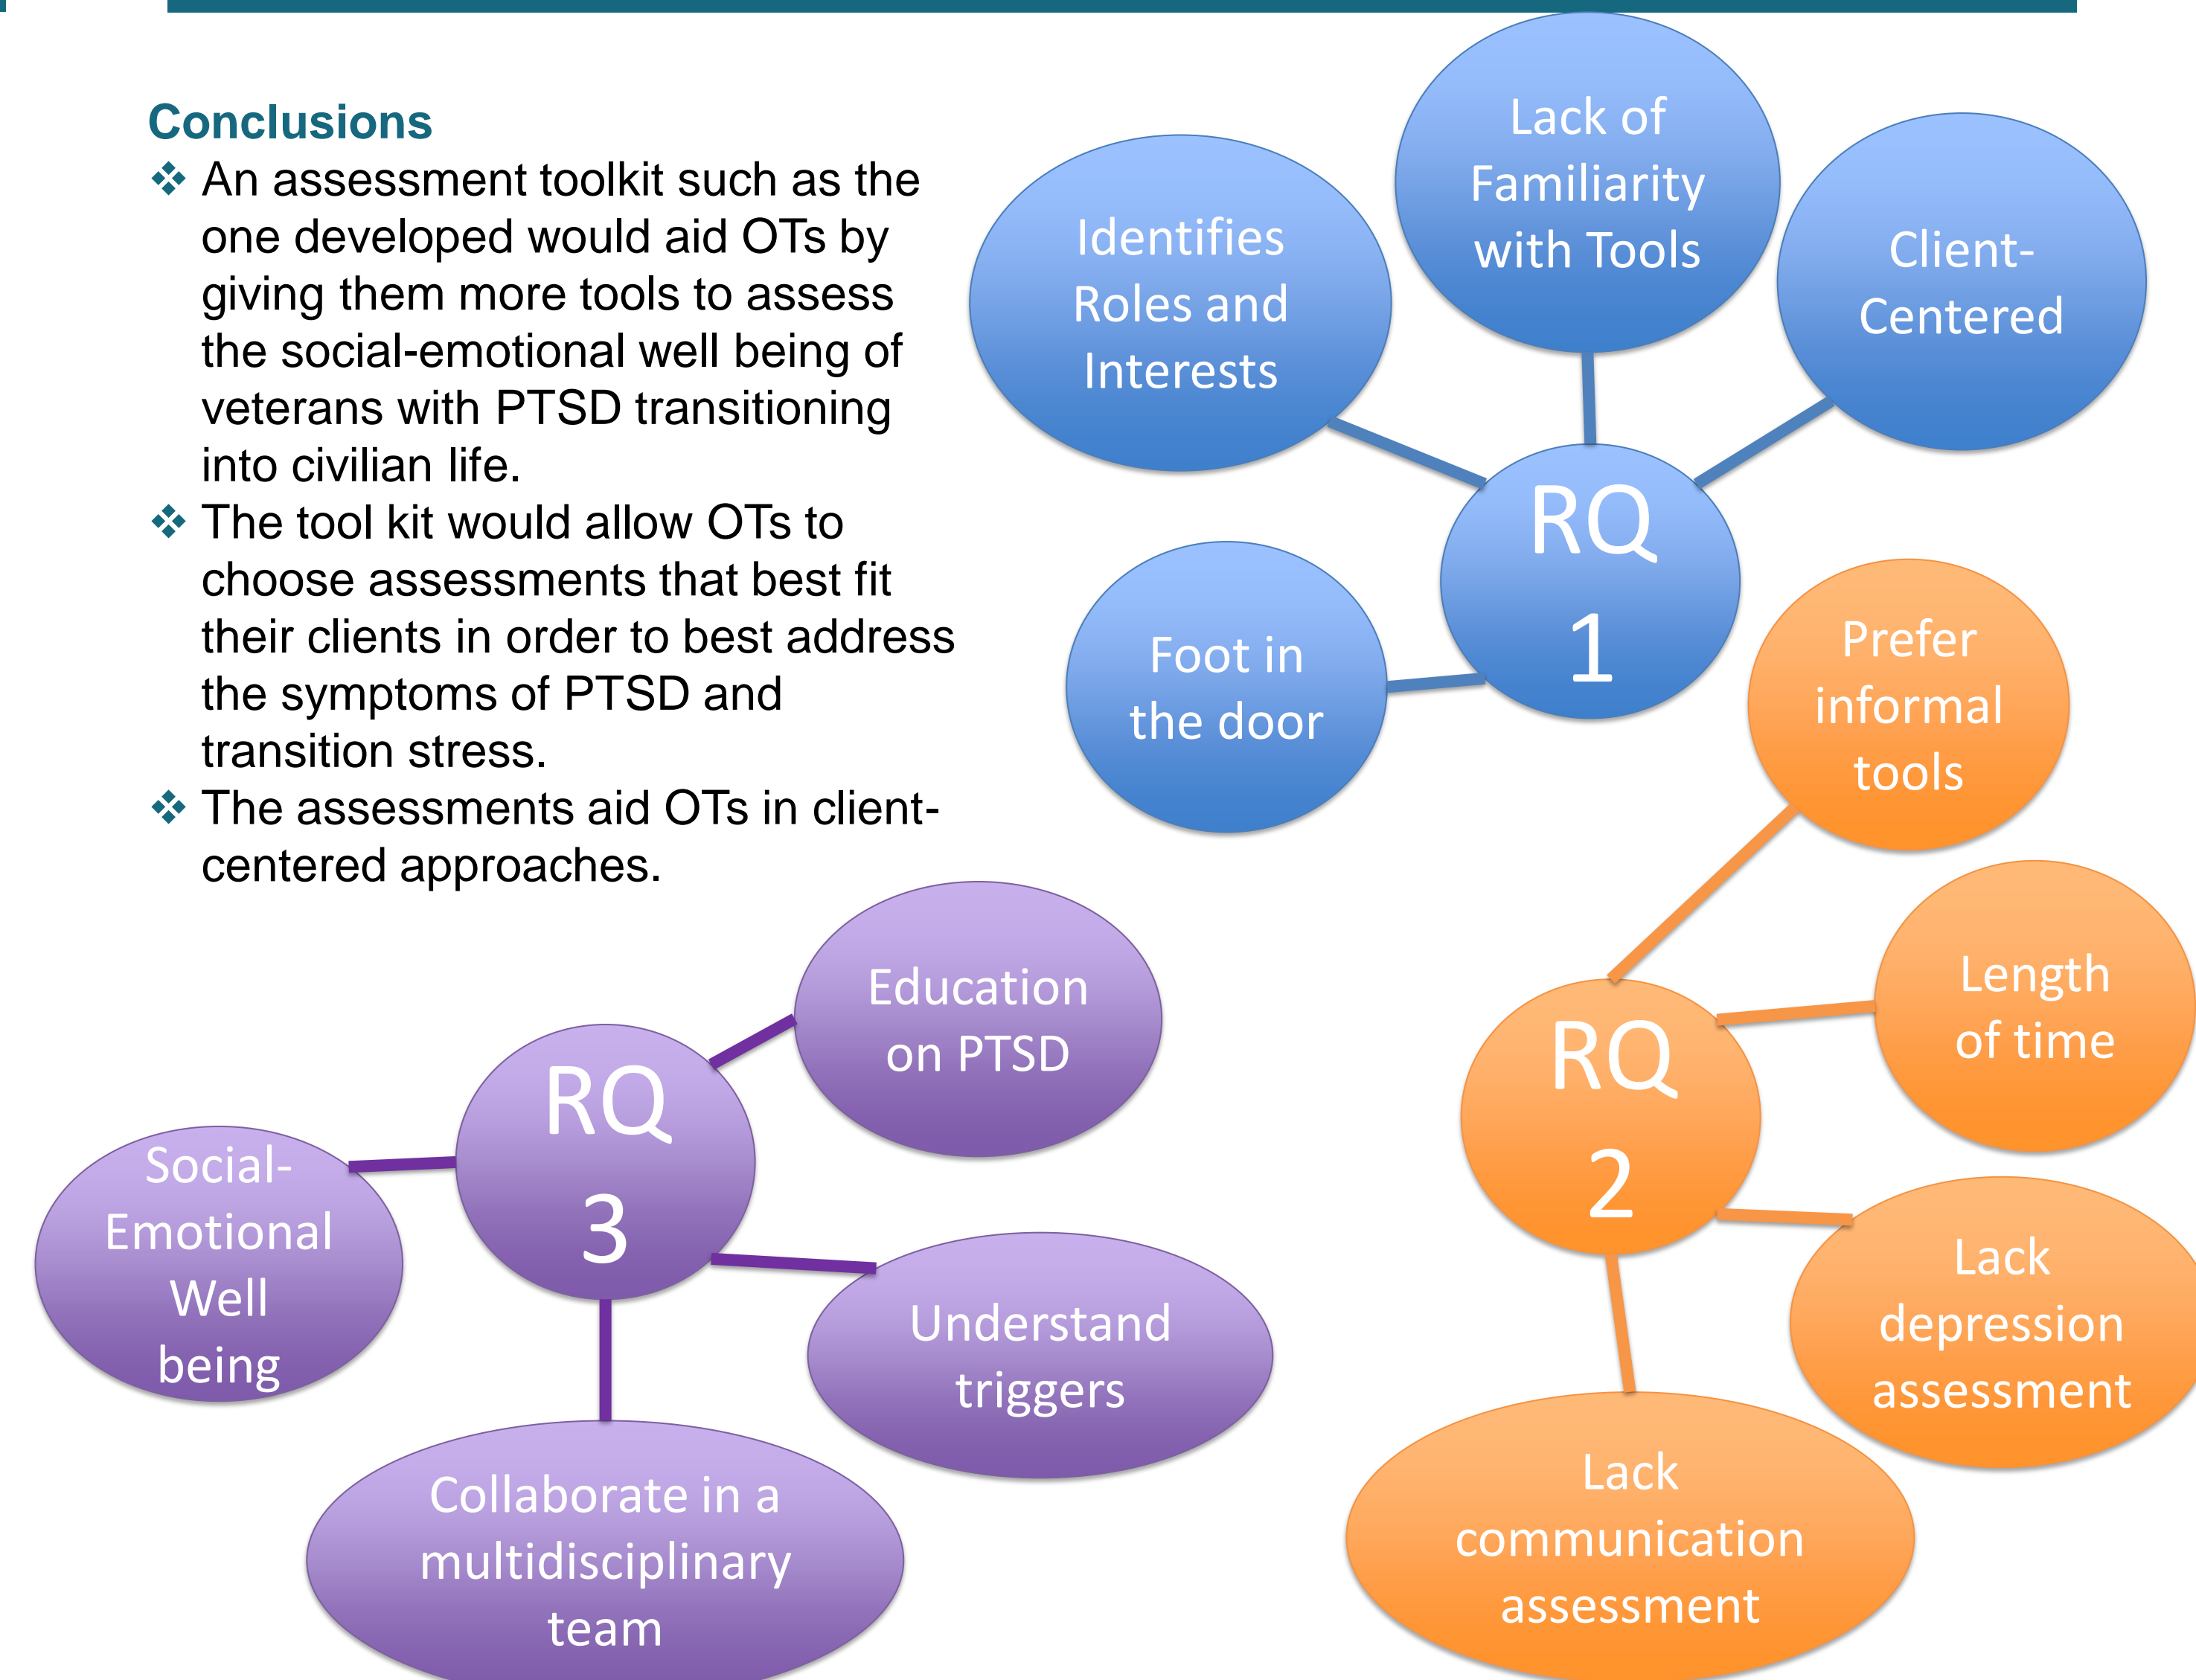

Temporally focused on the present (Gerardi, 2016)

Emphasis on volition (Blom et al., 2020)

RESULTS

Conclusions

- ❖ An assessment toolkit such as the one developed would aid OTs by giving them more tools to assess the social-emotional well being of veterans with PTSD transitioning into civilian life.
- ❖ The tool kit would allow OTs to choose assessments that best fit their clients in order to best address the symptoms of PTSD and transition stress.
- ❖ The assessments aid OTs in client-centered approaches.

Recommendations

- ❖ Focus group of OTs to discuss the themes found
- ❖ Advocate for education on PTSD symptoms and transition stressors to professionals serving this population
